Lab 2 reflection

For this project, I felt very challenged by the work and what was done. As a data science major, I have never taken on something of this scale and felt very in over my head, especially at the beginning. There were 3 main sections to our project; the manager, customer and employee. I worked on the employee section of this project, and found it to be very challenging overall. This is again due to my lack of knowledge in this field overall, and I felt out of my depth for a large portion of this. Due to this, I was heavily reliant on my AI helper on this project, more than I would have liked but it was necessary for me to get usable results. Unfortunately, due to my gap in knowledge, I was struggling with phrasing my prompts to help me get workable results. Due to this, I asked Christian for more help and was extremely helpful in guiding me for what needed to be done and figuring out ways to to phrase certain prompts. I felt like the main thing I learned from this lab was the structure of all of this files and how everything should look, along with how certain files should interact.

I felt as though I grew a lot during this project, as I was challenged at every turn and was able to overcome it with the help of my group mates.
